A Dictionary of Neurological Signs A.J. Larner

This updated and expanded Fourth Edition is an alphabetical listing of commonly presenting neurological signs designed to guide the physician toward the correct clinical diagnosis. The dictionary is focused, problem-based and concise.

The structured entries in this practical, clinical resource provide summaries of a wide range of neurological signs. Each entry includes: a definition of the sign; a brief account of the clinical technique required to elicit the sign; a description of the other signs which may accompany the index sign; an explanation of pathophysiological and/or pharmacological background; differential diagnosis; brief treatment details; and where known, the neuroanatomical basis of the sign.

A Dictionary of Neurological Signs, Fourth Edition, is an indispensable reference for all students, trainees, and clinicians who care for patients with neurological disorders, and could also be used in preparation for exams, since each entry is a snapshot of a specific disorder or disease.
