Ronald M. Green

Ethical and Legal Issues in Neurology: Chapter 6. Religion and medical ethics (Handbook of Clinical Neurology) Ronald M. Green

Religious traditions of medical ethics tend to differ from more secular approaches by stressing limitations on autonomous decision-making, by more positively valuing the experience of suffering, and by drawing on beliefs and values that go beyond empiric verification. I trace the impact of these differences for some of the world's great religious traditions with respect to four issues: (1) religious conscientious objection to medical treatments; (2) end-of life decision-making, including euthanasia, physician-assisted suicide, and the withholding or withdrawing of life-sustaining treatments; (3) definitions of moral personhood (defining life's beginning and end); and (4) human sexuality.
