Optical Pattern Recognition

Optical Pattern Recognition

This book provides a comprehensive review of optical pattern recognition, covering theoretical aspects as well as details of practical implementations and signal processing techniques. The first chapter is devoted to pattern recognition performed with optical correlators. Later chapters discuss new approaches based on neural networks, wavelet transforms, and the fractional Fourier transform. The book also covers nonlinear filter methods and optical-electronic hybrid systems. The final part deals with the devices and materials employed in modern systems, such as photorefractive crystals, microlasers, and liquid crystal spatial light modulators. The volume gives many examples of working systems that integrate optics, electronics, and computers, and it covers a range of new developments from mathematical theories to novel optical materials. It will be of great interest to graduate students and researchers in optical engineering and machine vision.

From reader reviews:

Mary Conley:

Now a day individuals who Living in the era exactly where everything reachable by connect with the internet and the resources within it can be true or not involve people to be aware of each information they get. How many people to be smart in obtaining any information nowadays? Of course the correct answer is reading a book. Looking at a book can help folks out of this uncertainty Information specifically this Optical Pattern Recognition book because this book offers you rich details and knowledge. Of course the knowledge in this book hundred per-cent guarantees there is no doubt in it you probably know this.

Christopher Kennedy:

The e-book untitled Optical Pattern Recognition is the e-book that recommended to you to see. You can see the quality of the publication content that will be shown to anyone. The language that publisher use to explained their way of doing something is easily to understand. The article author was did a lot of study when write the book, therefore the information that they share to you is absolutely accurate. You also will get the e-book of Optical Pattern Recognition from the publisher to make you more enjoy free time.

Mark Blanding:

Spent a free time to be fun activity to do! A lot of people spent their leisure time with their family, or their very own friends. Usually they accomplishing activity like watching television, gonna beach, or picnic inside park. They actually doing same task every week. Do you feel it?
